

® **ILUMITEX DRY FLAKE SPRAY SYSTEMS** **CLEANING & MAINTENANCE**

Product

Ilumitex 2000 and Ilumitextra are seamless, fine textured multi-coloured, spray applied, water-based interior wallcoatings.

Cleaning

The frequency of cleaning is mainly dependent on the interior working environment where the Ilumitex Systems have been applied.

Ilumitex Systems can be cleaned as part of a regular maintenance schedule.

Normal surface dirt can be removed by wiping the surface with clean, warm water incorporating a mild detergent (Teepol or similar). This should be followed by rinsing with clean fresh water and allowing the surface to dry,

More stubborn marks, such as scuff marks, grease and most water-based inks, including normal fountain pen inks, can be removed with the use of Pittaway Graffiti Wipes. These should be used in accordance with the instructions found on the labels and then rinsed off with clean fresh water.

Maintenance

Ilumitex Systems can be successfully patch repaired. This operation should be carried out preferably by the same operative where possible using the same equipment, technique, pressures and rate of application of material previously used.

Life Span

The anticipated life span of the whole and any constituent parts of Ilumitex Systems is two to three times that of ordinary Vinyl Matt Emulsion.

The actual life span of the system is dependent on factors such as; cleaning requirements, interior working environment, etc.
